

### **Attachment 3 – Email Comments – Leeson Street Traffic Calming Pilot**

- So, these lovely speed bumps! Maybe they should be put in front of some of your houses for awhile. It is not a totally bad idea, but please get rid of the dumb poles in the roadway, make the speed bump go all the way across the road, and add at least twice as many. Probably more. Because now all I hear is vehicles slowing down and then gunning it after the speed bump. That is very annoying. If there were constant bumps like (like the north half of Leeson where the road is so rough) then maybe. And I say maybe the traffic will slow down. The way it is now it only slows the traffic down at the actual bump not all the way down the road because the traffic out the pedal down hard after each bump. I hope there is more opportunity to comment on the effectiveness of this project. Also not sure about backing my trailer in the driveway with a pole in the middle of the road. But they come out easy enough too I guess.
- The speed bumps are an excellent idea but not effective we thought. Some cars did not even slow down. They also created traffic problems when people parked in front of them forcing people to use the opposite ones. I would like to see 5 instead of three. More speed limit signs also. 25-30 klm an hour would be better than 40 on a residential street with lots of kids. 40 is ok on Main(25) but too fast for Leeson.
