

GRAND VALLEY

Town of Grand Valley Operating Budget 2025

Sewage Treatment Plant

The Town's Sewage Treatment Plant includes the processing facility at the end of Watson Road and two pumping stations. In 2025, a new pumping station will be constructed, as discussed in the Capital Budget.

The other funds budgeted include insurance, property taxes, operating overhead costs, and the costs to employ the Ontario Clean Water Agency (OCWA) to operate the system for the Town. This contract is expired at the end of 2024, and the new contract pricing has been included in this budget.

The Sewage Treatment program is fully funded by the special levy charged to property owners who are connected to the system.

Second Draft:

- No amendments requested.
