Subject: Inquiry About Potential for Solar Project on Brownfield/Closed Landfill Site

Dear Ms. Townsend,

I hope this email finds you well. My name is Mila Simon, and I am writing to inquire about the potential to utilize your brownfield and/or closed landfill sites located in your municipality for solar energy generation projects. Brownfields and/or Closed landfill sites present unique opportunities for solar energy projects due to their open space and restricted alternative land uses. Transforming these sites into solar power generations presents an exciting opportunity for sustainable development and environmental stewardship, transforming your liability into your asset.

We offer lease options for your brownfield or landfill, as well as partnership opportunities for solar projects with your municipality, tailored to your specific needs. If the municipality is interested in exploring this opportunity, you can provide me with the GPS coordinates of the brownfield and/or landfill, and we will assess its solar potential at no cost to you. I would be happy to share our findings and provide further details on how these solar projects can benefit your municipality both financially and environmentally.

SolarBank is headquartered in Toronto, Ontario, and currently has 10 landfills under development for solar generation throughout North America. Please visit www.solarbankcorp.com for more information.

Thank you for considering this inquiry. I look forward to your response on this exciting opportunity.

Best,

Mila Simon
